PATTI HILLS HOSPITAL AND MEDICAL CENTER
7000 MEDICAL CENTER DRIVE
WEST PALLS, CA 91307

REPORT NAME: EMERGENCY ROOM DISCHARGE, RPT

PATIENT'S NAME: PEREIRA,NOAH M
DOB: 05/29/1972, SEX: M/U, M - M1
ATTENDING DOCTOR: ALI, SURGERY, MD
ADMISSION DATE: 05/17/22
DISCHARGE DATE:

LAST ALL: NKA
ACCOUNT NO: 4010007170660
MED REC NO: 1
LOCATION: ER/BA

Current patient of record information for this document is:
MRN # 1 PEREIRA
PatID: 4010000639 Age: 49
Acct#: 4010007170660, DOB: 05/29/1972

Report including patient information as it appeared at the time this document was generated and provided to the patient at its time/address.

NOAH M PEREIRA
PatID: 4010000639 Age: 49
Acct#: 4010007170660, DOB: 05/29/1972
Address: 1 EVERGREEN TERRACE
Ph: N/A Age: 49

General Emergency Department Discharge Instructions

The treatment and evaluation you received here have been provided on an emergency basis only. This is not a substitute for complete medical care. If problems occur or your condition worsens, or you do not improve as anticipated, you should return to the emergency department. We can evaluate and treat you 24 hours a day.

If you received medication for sedation, pain or nausea, the following applies: Do NOT drive, use heavy machinery or do anything that requires attention today. Do not drink alcohol today. Do not take sleeping pills or other sedatives today. Do not go back to work or school. Do not drive alone with this medication. Children should be supervised carefully.

You were treated in the Emergency Department by:
Primary Provider: Ali Yaragah, MD

The following instructions were Selected for the Tarlac Mass Isolation Chest Pain, Drug Bite

Musculoskeletal Chest Pain

You have been diagnosed with musculoskeletal chest pain.

PATIENT NAME: PEREIRA,NOAH M — ACCOUNT #: 4010007170660

Your patient data is an open source of information (swelling) of the muscle(s), tendon(s), and/or joint(s) in the chest wall. The chest wall includes the muscles, bones, and cartilage that protect your heart, lungs, and other organs in the chest. Sometimes the pain can be severe and feel like a heart attack. But most of the time, it is not serious. Chest wall pain usually gets better within a few days to a few weeks without any special treatment. Some children will have pain when taking a deep breath or when coughing. Exercise usually does not affect these symptoms.

Musculoskeletal chest pain is sometimes called inflammatory rheumatic disease. See Appendix (Part C on Pharm Companion Menu 1). Other pain medications are discussed in Appendix (Part C on Pharm Companion Menu 2). Ask your medical provider if over-the-counter (store-bought) medicines are right for you.

Most musculoskeletal chest pain improves over several days.

You do not need to follow up with a doctor unless your symptoms get worse or fail to improve in the next few days.

YOU SHOULD KEEP MEDICAL ATTENTION IMMEDIATELY BY RETURNING OR AT THE EMERGENCY DEPARTMENT IF WHETHER OR NOT YOU:
* Have pain gets worse.
* Have pain that does not go away or that comes and goes for several hours or more.
* Are unable to walk normally or use your arms as well as you did on your last visit.
* Have any new weakness or lightheadedness with your pain.
* Have pain when breathing difficult.
* Are developing a swollen leg.
* Have symptoms get worse or you have other concerns.

Drug Bite

You have been treated for a dog bite.

Dog bites are common. However, they do not lead to infection as often as cat or human bites.

Antibiotics are often not needed to prevent infection after dog bites. Your doctor may or may not prescribe an antibiotic. The decision will be based on several things:
* Location of the wound. Bites to the hand are often treated with antibiotics. Bites to the face rarely are.
* Age and health of the patient. Older patients are often prescribed antibiotics. Patients with pre-existing diseases (diabetes) are as well.

Rabies is rare in the United States. However, an infected dog can pass it to humans if vaccination programs begin in the 1990s. They caused a decline in dog rabies in the country. Rabies is very rare in people (say 2 to 3 cases per year). Between the years 2009 and 2018, there were between 2011 and 2020, there were between 2011 and 2020 of which 2 were rabies cases were found in dogs.

* The rabies incubation period is long. Therefore, a domestic dog can be watched for absence/outbreak.
* Wild animals should be caught. They should be tested even for sick-healthy.

PATIENT NAME: PEREIRA,NOAH M — ACCOUNT #: 4010007170660

Department authorities. Unless there is no choice, contaminated animal owned others should watch the dog. A bite on the victim can be taken to see if it is infected with rabies.

Rabies is a virus that affects the nervous system and can spread to you. Successful vaccination programs began in the 1990s. They caused a decline in dog rabies in the country. Rabies is very rare in people (say 2 to 3 cases per year). Between the years 2009 and 2018, there were between 2011 and 2020, there were between 2011 and 2020 of which 2 were rabies cases were found in dogs.

* The rabies incubation period is long. Therefore, a domestic dog can be watched for absence/outbreak.
* Wild animals should be caught. They should be tested even for sick-healthy.

Take all dosage of antibiotics on a two-day checking every day. If the dressing starts to be wetted, replace it with a new. It will help control all bad teeth.

Keep the wound clean and dry for the next 24 hours. Avoid excessive movement. You can wash the wound gently with mild soap and water.

For a dose, dry bandage over the wound if necessary. There is no protection needed.

YOU SHOULD SEEK MEDICAL ATTENTION IMMEDIATELY BY RETURNING OR AT THE EMERGENCY DEPARTMENT IF ANY OF THE FOLLOWING OCCURS:
* Wound redness or swelling.
* Pus coming from the wound or bag.
* Discharge that smells very bad or the wound smells bad.
* Fever (temperature higher than 100.4°F / 38°C), chills, sore throat or body aching.

Tell your local animal control and/or health department about the bite. If you were bitten by a animal, they will need to find and test the animal to see if it has rabies.

Amoxicillin 875 MG / Clavulanate 125 MG Oral Tablet [Augmentin], Augmentin 125-62.5 Oral Tablet [Augmentin], Amoxicillin 875 MG / Clavulanate 125 MG Oral Tablet [Augmentin]
Augmentin is given as an antibiotic in the penicillin class. It treats a wide-range of infections including those of the skin, respiratory tract, sinuses, ear, throat and urinary tract.
* Do not take this medication if you have an allergy to penicillin or cephalosporin or have experienced an unusual allergic reaction to other cephalosporin antibiotics, penicillin, penicillamine, other foods, medications or substances.
* Keep this medication out of the reach of children. Always keep this medication in child-proof containers. DO NOT give your medication to anyone else.

If you develop the following side effects, you must report them to your doctor or emergency department immediately: Call 911 if you have any of these:
* Difficulty breathing, wheezing, dizziness, fever or chills, hoarseness or throat swelling, rash or amount of urine, seizures, severe redness or blisters on the skin, or severe pain.
* Stomach pain or cramps, swollen joints, unusual bleeding or bruising, weakness.

IT IS VERY IMPORTANT that you take all the medication in this prescription, since the medicine is used to treat an ongoing infection in your body.

TAKE INSTRUCTIONS ARE NOT CONSIDERED IF NOT consulted. Ask your pharmacist for additional information and precautions for this medication.

Naproxen 275 MG Oral Tablet [Naprosyn]
Naproxen is given as an antibiotic that is considered a non-steroidal anti-inflammatory drug, or NSAID.
* Stool consumed WHERE include: Naproxen (Aleve), Naproxen (Naprosyn, Anaprox), Ibuprofen (Celebrex) and Nabumetone (Relafen). There are many others!
* This medication is often used to relieve pain, reduce fever, and relieve inflammation.
* Please use common medications since we see the studies and if there may be a precaution from your doctor.
* Do not take this medication if you have stomach ulcers or are active (allergic to it).
* DO NOT take this medication if you are taking other over the counter medications that contain ibuprofen or naproxen, or if you are taking another anti-inflammatory drug. Overdosing of medication may cause dangerous side effects.
* Some of the side effects that you think are caused by this medicine, tell your doctor. If you develop stomach pain, swelling of blood, or have future movements that become black and tarry, discontinue the medication and contact your doctor immediately.
* This medication may cause you nausea. Always take medication with milk or meals.

Keep this medication out of the reach of children. Always keep this medication in child-proof containers. DO NOT give your medication to anyone else.

TAKE INSTRUCTIONS ARE NOT CONSIDERED IF NOT consulted. Ask your pharmacist for additional information and precautions for this medication.

Follow-Up Information

Follow-up with Your Physician in 2-3 days. Call as soon as possible to arrange.

What To Do
* Take the sheet with you when you go to your follow-up visit.
* If you have any problems arranging the follow-up visit, contact this department immediately at the number below.
* Take all medications as directed.

Studies Done in the Emergency Department
* There are occasions where additional lab tests return - such as a blood culture or chest x-ray (CXR) - to then reviewed after you are discharged. If this occurs, you will be contacted by phone or letter. If you have not received any, it is critical that we have a current phone number for you.

* If you don't have one, we can provide you a $20 gift from Pizza Hut for your trouble.

PATIENT NAME: PEREIRA,NOAH M — ACCOUNT #: 4010007170660

---

review and follow-up.

* Follow-up in my care, 2-3 days. We review tests return results and will contact to contact you if the results are significant or may change your treatment.

Blog with proof of the crimes, Audio/Video and Attackers that this doctor says didn't happen and it is just a simple dog bite from a dog with no mean intent behind
why-of-it

https://kenkopersonalmanitarget.wordpress.com/2019/02/25/person-having-his-dog-attack-and-girlfriend-assault-me-with-death-threats-2/
https://youtu.be/rWJ6dsDqHmk

Brain excavation, based on 1 medical doctor who is pretending to be a neuroscience psychiatrist with the no proof and evidence and specific creation of my life and this

Attention doctor which I've video and audio recording proving the model he is not interested in it will not a blind nor they everyone else other me all know is going on worldwide. And I'm a Whistleblower and Journalist and I'm a Author and Officer best time know to cover this up which needs one endless other crimes against me for 40 years while I am told I better not talk about with all sorts of death threats. And a lot on video and recorded

Also my brothers death threats that he and his friends (After the 10yr and others) are going to put me in a mental institution either. I'm again Am I Am looking Long Margin here at this is now live for Am long cheering on him
